

# ToUcam Imaging of the Moon at the Campus Observatory by F. Ringwald

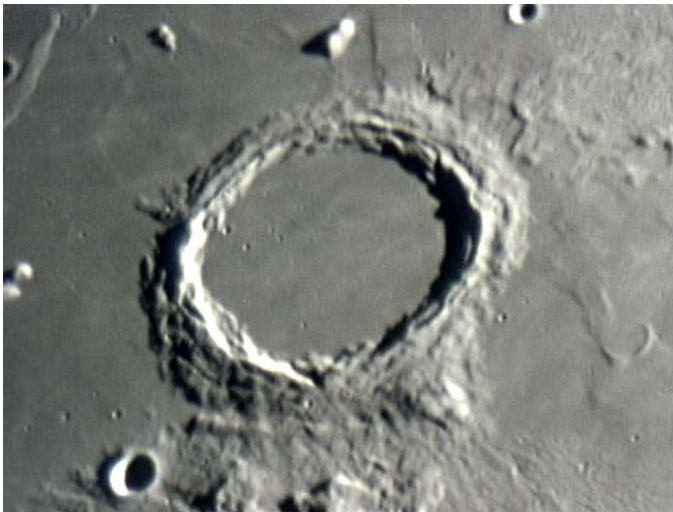

I took all these images with a \$150 Philips ToUcam (pronounced "To-YOU cam") through the 16-inch Meade LX200 telescope at Fresno State's Campus Observatory. The free program Registax selected the best individual video frames.

Sinus Iridium, the Bay of Rainbows

Himalus rilles

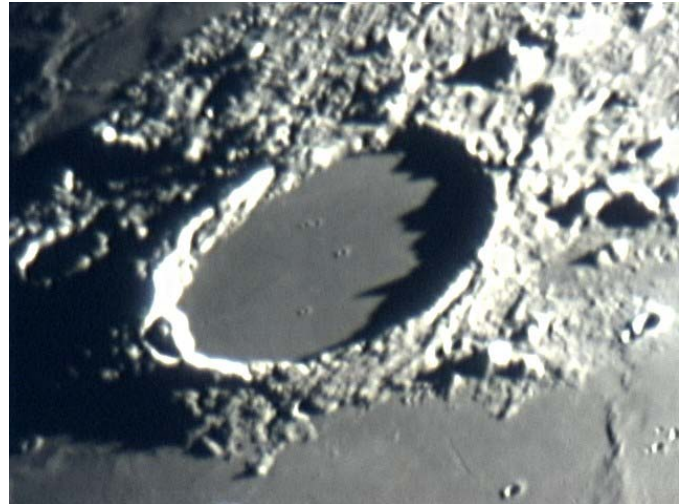

Archimedes crater

Tranquility Base, site of the Apollo 11 landing

Gassendi crater

Plato crater

More images of the Moon are on the Campus Observatory's Moon gallery page, at:  
<http://zimmer.csufresno.edu/~fringwal/moon-gallery.html>.
