

# Ford vs. Mazda Assignment

On the top half of a page, draw a diagram (any type of diagram, as long as it is meaningful, clear, and accurate) of Ford's old A/P system, as explained in this [reading](http://zimmer.csufresno.edu/~sasanr/Teaching-Material/MIS/Operations/Ford-vs-Mazda.pdf).

On the bottom half of the page, do the same for their new A/P system, explained in the same reading.

These diagrams may be hand-drawn/scanned or done in some drawing software, such as Visio or MS-Word (Insert/Shapes). This diagram needs to be **at least** as clear as the diagram in the *Service Map Example: [Auto Repair](http://zimmer.csufresno.edu/~sasanr/Teaching-Material/MIS/Operations/auto-repair-process.pdf)* example.

Use that type of diagram if you do not have any better ideas of your own. At the very least, it should have arrows showing what information travels from where to where.
